

Abstract of the Disclosure

Flying Disk Accessory with a C shaped member and an attached handle member. The handle member has a gripping portion attached to an elongated rod shape. The end of the rod portion of the handle member is joined to the C shaped member at the lower portion of the C shape. The C shape has a U shaped cross section where the legs of the U shape are facing toward the center of the C shape. The C shape has a spring biased hinged joint near the junction of the C shape so that the the rod portion is fixedly joined to the lower portion of the C shape. The C shape ends each curve outwardly in the opposite direction of the curve of the main body of the C shape. A hinge pin midway along the handle rod allows for folding during storage.
